

METC MADNESS LINEUP

Picture	Competitor
	<p>St George and the Dragon- This scene of St. George and the dragon can be found hiding in METC’s Main Gallery fireplace. St. George is no longer hiding, and is ready for some competition.</p>
	<p>The Griffin- Standing at 4ft and made of terracotta, the James Building Griffin once topped the building that now houses METC’s Education Annex. This is one of the original statues that now guards the court(yard).</p>
	<p>Magic Lantern- This object is “projected” to win! The Magic Lantern is an early type of projector. Using a light source, concave mirror, a lens, and a painted glass slide could be projected onto a wall. Magic lanterns were also used for early-animated movies using a quick sequence of glass slides to make it appear as though the images were moving.</p>
	<p>Stereoscope- The stereoscope allowed people to see faraway places before the era of easy travel, movies, and television by placing different cards in the holder and looking through the lenses. However, can this competitor see into the faraway future for a win?</p>
	<p>Beading Plane- This carpenter’s tool created a bead along the edge of a board. This is one of the most versatile carpenter’s planes in the game, used for back boards, table aprons, and more!</p>

Hatchel- This spikey competitor is a comb for separating flax fibers. The hatchel had better be careful or those spikes might cause some fouls!

Watchman's Rattle- Made of cherry wood, this watchman's rattle would have been used in the early 1800s to alert people in case of an emergency. Get ready to make some noise and cheer the Watchman's Rattle on!

Uncut Currency- This is a sheet of uncut and unsigned bank notes from Morris County Bank dated June 1857. We're betting big money on this object to do well!

Planetarium- This hand cranked model of the sun and mercury is missing the earth and the moon. Despite injuries and being down planets, the staff at METC still think our planetarium is a fierce competitor.

Shooter's Glasses- These eyeglasses are known for their shooting accuracy. The brown tinted circle in the center of the lenses helped shooters focus their eyesight.

	<p>Mouse Trap- One of the best defensive players in our lineup. This object was used to trap sneaky mice!</p>
	<p>Flower Press- Watch out for this object to do a full court press, leather press that is. This object was used to create leather leaves and flowers that decorated clothing!</p>
	<p>Needlepoint Purse- This purse is sure to throw up some serious “points.” This is a small, unlined needlepoint purse from the 19th century.</p>
	<p>Sampler- No need for x’s and o’s here. This sampler created by Mary E. Daniels in ca. 1800 highlights the skill of the creator!</p>
	<p>The Complete Herbalist- If the aches and pains of the game have you benched; look no further than to the Complete Herbalist. Published in 1873, this book describes various herbal remedies.</p>
	<p>Recipe Booklet- If all this competition has got you hungry, skip the concession stand and look no further this recipe booklet sponsored by C.I. Hood & Co., proprietors of Hood's Sarsaparilla, Lowell, Mass.</p>
